MEMORANDUM FOR: Special Assistant to the Director
for Planning and Development

THRU : Deputy Director, DPS/DCI *MB*

SUBJECT : Rear View Mirror

REFERENCE : CHAL-0277

25X1

1. In answer to your memorandum dated 6 August concerning the [redacted] rear view mirror installation, the following is a recap of action taken:

25X1

2. On or about 15 August, the [redacted] drawings and photographs showing the exterior mounted rear view mirror installation were sent to [redacted]. [redacted] was requested to run functional flight tests on this item to determine exactly how accurately the pilot could see his own contrail.

3. On 21 October [redacted] was requested to furnish information concerning the rear view mirror. This query was answered on 22 October [redacted]. The following information is extracted from the [redacted] answer:

"1. Reference mirror installed on 378. Effect on performance estimated to be negligible.

"2. Functional flight tests showed following:

"a. In climb, observing airplane can see contrail approximately 4500 feet before pilot can see in mirror.

"b. Contrails still exist for approximately 4500 feet after pilot stops seeing them.

"c. In descent the difference between mirror and observer is less.

"d. In gust position, contrails can be seen sooner and longer."

4. Information available in this office does not indicate that any tests were made concerning the ability of the pilot to detect intercept aircraft. It is planned to request [] to perform functional tests in order to determine if the rear view mirror is effective along this line. These tests will be run in conjunction with other activities at [] A possibility to incorporate these tests with the [] tests exists.

25X1

5. It may be noted in [] para 3, that [] #349 has a modified mirror installed which is slightly cleaner and allows some adjustment. When 349 is in position at [] we will request [] pilots to comment on this modified mirror installation.

25X1

25X1

25X1

6. Based on information received from [] and indications from [] tests, it is felt that the drag is negligible. It is Operation's opinion that this installation is a valuable asset. The need will increase as time goes on, consistent with estimates of future Russian capabilities to intercept. With your approval Operation's will request [] to investigate the feasibility of coming up with one suitable answer to the Contrail-intercept problems.
